

PUBLIC TRANSPARENCY REPORT

2025

Sector Asset Management AS

Generated 24-11-2025

About this report

PRI reporting is the largest global reporting project on responsible investment.

It was developed with investors, for investors. PRI signatories are required to report publicly on their responsible investment activities each year. In turn, they receive a number of outputs, including a public and private Transparency Report.

The public Transparency Reports, which are produced using signatories' reported information, provide accountability and support signatories to have internal discussions about their practices and to discuss these with their clients, beneficiaries, and other stakeholders. This public Transparency Report is an export of the signatory's responses to the PRI Reporting Framework during the 2025 reporting period. It includes the signatory's responses to core indicators, as well as responses to plus indicators that the signatory has agreed to make public.

In response to signatory feedback, the PRI has not summarised signatories' responses – the information in this document is presented exactly as it was reported.

For each of the indicators in this document, all options selected by the signatory are presented, including links and qualitative responses. In some indicators, all applicable options are included for additional context.

Disclaimers

Legal Context

PRI recognises that the laws and regulations to which signatories are subject differ by jurisdiction. We do not seek or require any signatory to take an action that is not in compliance with applicable laws. All signatory responses should therefore be understood to be subject to and informed by the legal and regulatory context in which the signatory operates.

Responsible investment definitions

Within the PRI Reporting Framework Glossary, we provide definitions for key terms to guide reporting on responsible investment practices in the Reporting Framework. These definitions may differ from those used or proposed by other authorities and regulatory bodies due to evolving industry perspectives and changing legislative landscapes. Users of this report should be aware of these variations, as they may impact interpretations of the information provided.

Data accuracy

This document presents information reported directly by signatories in the 2025 reporting cycle. This information has not been audited by the PRI or any other party acting on its behalf. While this information is believed to be reliable, no representations or warranties are made as to the accuracy of the information presented.

The PRI has taken reasonable action to ensure that data submitted by signatories in the reporting tool is reflected in their official PRI reports accurately. However, it is possible that small data inaccuracies and/or gaps remain, and the PRI shall not be responsible or liable for such inaccuracies and gaps.

Section 1. Our commitment

- Why does your organisation engage in responsible investment?
- What is your organisation's overall approach to responsible investment, and what major responsible investment commitment(s) have you made?

As a signatory of the six principles of responsible investment, Sector Asset Management AS strongly believes that an economically efficient and sustainable global financial system is a necessity for long-term value creation. More than before both customers and employees make their choices based on values and purpose, framing questions on carbon footprint and how companies contribute to a more circular economy. Integration of ESG issues into the investment process helps Investment Managers to sharpen their minds on these extra-financial risks that may be less obvious but can have a material impact over time. Hence the principles go to the core of prudent risk management. We encourage the Investment Managers on our platform to acknowledge the risks and opportunities related to applying a broad perspective in assessing various businesses and believe living the UN PRI principles helps in delivering higher return with better controlled risk to the investors.

Section 2. Annual overview

- Discuss your organisation's progress during the reporting year on the responsible investment issue you consider most relevant or material to your organisation or its assets.
- Reflect on your performance with respect to your organisation's responsible investment objectives and targets during the reporting year. Details might include, for example, outlining your single most important achievement or describing your general progress on topics such as the following (where applicable):
 - refinement of ESG analysis and incorporation
 - stewardship activities with investees and/or with policymakers
 - collaborative engagements
 - attainment of responsible investment certifications and/or awards

In 2024, we continued to engage with different stakeholders on the complexities of CO2 reduction measures. We also participated in PRI working groups on human rights and social issues, aiming to strengthen how ESG and proxy voting data providers evaluate corporate human rights performance. We raised concerns about the quality, consistency, and narrow focus of current human rights data, advocating for a more holistic, forward-looking approach beyond controversy-based assessments. Our portfolio managers actively encourage companies to improve transparency and take meaningful action on social issues, driving greater accountability and impact.

Section 3. Next steps

- What specific steps has your organisation outlined to advance your commitment to responsible investment in the next two years?

We have a particular competence and strong interest in the complexities of CO2 abatement, far beyond the conventional focus on Scope 1, Scope 2 and Scope 3 carbon emissions. A core part of our mission is to raise awareness among different stakeholders and opinion leaders that monetary cost and CO2 cost are fundamentally different metrics. As a result, using financial cost as a proxy for CO2 efficiency is often inaccurate and misleading. We emphasize that CO2 payback time is likely the most important factor when prioritizing abatement measures. Just as money flow compounds over time, so too do the effects of CO2 reduction.

We are continuously refining our CO2 accounting for different interventions. A detailed study on solar energy indicates that in less sunny regions like Northern Europe, the CO2 payback time exceeds 6–7 years (not including the effects of intermittency, compared to the “consensus” 1-2 years). This is way too low. Even if this figure were halved in the coming decade, other measures with faster payback should be prioritized before solar in these areas. Electric vehicles (EVs) also raise concerns. As long as both battery production and electricity generation rely heavily on coal, EVs represent a significant CO2 burden.

Postponing the widespread transition to EVs by up to 10 years—until the grid is substantially decarbonized—could lead to far more effective emissions reductions. Once powered by a clean grid, EVs will indeed become a highly efficient solution. We also see nuclear energy, developed with more efficient regulation, and scaled through industrial production, as one of the most reliable paths toward a low-carbon energy system. We will continue to advocate for this data-driven, non-consensus perspective on CO2 abatement in the years to come, advocating for more effective prioritization in climate policy and investment in the years to come.

We closely monitor development in ESG trends. The ESG data is very important for transparency and incorporating better practices for the companies. However, we think the quality of data is too low right now in order to use it in scenario analysis. It is very difficult right now to put meaningful number on the various ESG issues and use it as it is. The data can be inadequate and misleading, and do not taking into account the impact of the whole value chain, or what is already priced in the market.
